BY EDWARD F. KELLY, EMILY WILLIAMS KELLY,  
ADAM CRABTREE, ALAN GAULD, MICHAEL GROSSO, AND BRUCE GREYSON

*"This is an extraordinary book. In the arena of neuroscience of the mind, it is the most exciting reading to have crossed my path in years"*

—David Presti, Professor of Neurobiology,  
University of California-Berkeley

*"If you're content to be a narrow specialist, you may not find this book interesting, but if you want to be a real psychologist, in the style of greats like William James, it is required both to read this book and to deal with the ideas in it."*

—Charles T. Tart, Professor Emeritus of  
Psychology, University of California-Davis

*"Brilliant, heroic, and astonishing... A scientifically rigorous and philosophically informed critique of various contemporary orthodoxies in mainstream psychology, IRREDUCIBLE MIND has a bottom-line: either our current understanding of the material world is woefully incomplete because we still don't know how to explain mental powers in purely physical terms, or else there is far more to reality than just the material world"*

—Richard A. Shweder, William Claude Reavis  
Distinguished Service Professor, Department  
of Comparative Human Development,  
University of Chicago

Current mainstream scientific opinion holds that all aspects of human mind and consciousness are generated by physical processes occurring in brains. The present volume demonstrates—empirically—that this reductive materialism is not only incomplete but false. Topics addressed include phenomena of extreme psychophysical influence, memory, psychological automatisms and secondary personality, near-death experiences and allied phenomena, genius-level creativity, and 'mystical' states of consciousness both spontaneous and drug-induced. The authors show that these 'rogue' phenomena are more readily accommodated by an alternative 'transmission' or 'filter' theory of mind/brain relations—a theory that ratifies the commonsense conception of human beings as causally effective conscious agents, and is also fully compatible with leading-edge physics and neuroscience. The book should command the attention of all open-minded persons concerned with the still-unsolved mysteries of the mind.

November 2006 ♦ 800 pages  
cloth ♦ ISBN 0-7425-4792-2 ♦ list price \$79.95
